Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1842 Excerpt: .Find the Greenwich Date as nearly as possible at each observation, and compute the R. A. Subtract from the interval the change of R.A. and add to it the Acceleration. Reduce the declin. to the middle of the interval, as also the hor. par. and semid. In other respects proceed as for the sun. As a proper allowance for the rapid change of the declination would complicate the rule, the moon can be employed satisfactorily in this observation only in cases of very short intervals, and when her declination changes slowly. 2. Double Altitude, one Altitude being near the Meridian. 598. When one of two altitudes is taken near the meridian, and the other when the body has a large azimuth, the outer hour-angle (or that corresponding to the altitude furthest from the meridian), may be computed nearly (No. 489, p. 182), since it will not be much affected by an error in the latitude by account. The difference of the hour-angles being afforded by the measured interval of time, the other, or inner hour-angle, is found; and the Reduction being computed thereto, the mer. alt. is deduced. See Nos. 584 and 585. 599. Limits.--The inner alt. must be within the limits in Table 39, and the outer angle should be as nearly E. or W. as possible. When the outer bearing is not near E. or W. the outer hour-angle may be sensibly affected by the error of the lat. by ace.; and if the...
